Bundling Services

HOW BUNDLED SERVICES BENEFIT NONPROFITS & CHARITIES

What Exactly is Bundling?

Bundled Services is the grouping together of all your technology services, all in one plan. Service bundling refers to a package of several services combined into a single unit to best suit your needs. We understand how essential it is for nonprofits to communicate with clients, members, colleagues and community partners. We also recognize the importance of costs when developing a telecommunication plan. Consolidating services together makes everything seamless, but most importantly, much more cost effective for your organization.

Consider This

When individual products and services are purchased separately, your overall costs could increase leading you down a road of financial and service uncertainty. You might receive unreliable support while jumping through multiple hoops to get what you need done. With other priorities, it can be difficult to ensure the seamless flow of all of your telecommunication services and costs.

Visualize that your telecommunication services are housed under one umbrella. All of your technology and hardware are unified and they flow together. That's bundling and that's how we can help your nonprofit. Bundling all of the services you need in a unified way with one provider makes everything simpler and cheaper. We'll provide your nonprofit with the support you need with every aspect of your custom telecommunications plan.

Personalized Benefits of the ONNPP Wireless Services Program

As the preferred vendor for the ONNPP Wireless Services program, Sky Wireless provides services including wireless, phone systems and managed IT services that can be consolidated and customizable to what best suits the need of your nonprofit. We offer Ontario nonprofits personalized support and service. That's why we have a specialized, dedicated ONNPP Account Manager who will help you step-by-step to develop a plan that suits your needs. We are here to help nonprofits feel secure and confident that we will develop a plan that is best suited for your organization.

Peace of Mind

Dedicated to offering a wide range of solutions to meet all your nonprofit's communication needs, we focus on the latest technology and, most importantly, we are committed to helping nonprofits by listening, understanding, simplifying, and delivering the best possible solution. We have one goal and that is to deliver services and support that provide cost certainty and peace of mind so that your organization can focus on what matters most. Regardless of the path taken for your telecommunications journey, Sky Wireless is committed to providing Ontario nonprofits via the ONNPP Wireless Program with unparalleled support and service.

5 Questions

NONPROFITS SHOULD THINK ABOUT WHEN CONSIDERING A TELECOMMUNICATION PLAN:

I. Consider what the services will be used for

What will the telecommunications product / technology be used for?

Consider how your nonprofit communicates, how you want to be communicated with and your availability. Communications include phone calls, direct messaging and emailing. Knowing your availability and understanding how you communicate and how you want to be reached will help us understand how we can best help you. We'll work together to determine what products and technology are best to build your telecommunication plan.

II. Consider your staff and volunteers

How many people will be using the telecommunication product / technology?

Consider your nonprofit's staffing / volunteer complement and availability, who needs to be communicated with and your staff or volunteer capacity. At Sky Wireless, we know it's important for nonprofits to communicate with their colleagues, members, community partners and the communities they serve. Knowing the number of staff / volunteers who will use the products and technology can allow us to help you better understand which products and services will best fit your needs.

III. Consider your tech know-how

What is the technology awareness or capacity of the staff who will be using the product?

Technology is always evolving. Building awareness about using technology as a method of communication is a step in the right direction. Consider the capacity of staff /volunteers who will use the technology. That understanding will be built into incorporating products that will work best for your organization. We will help educate you on the latest technologies and provide your nonprofit with the dedicated support that you need.

IV. Consider your budget

What is your current budget?

All nonprofits need to budget and plan. We'll work with your budget and learn who in your organization needs the technology and what it will be used for. Together, we will build a telecommunication plan that benefits your nonprofit within your allocated budget.

V. Consider growth

How will your organization's telecommunications and tech needs grow in the next year?

Consider your nonprofit's current communication needs and future plans in correlation to our expertise. Streamlined and seamless communications may expand your organization's reach in the community which, in turn, could result in the need for increased technology. We are committed to assisting you as your nonprofit changes with the needs of your community.
